

Presentation of the SRC-EDIH project to GZDBK members

Members of the chamber (companies, entrepreneurs and other organizations and institutions) got to know the SRC-EDIH project as part of the regular meetings of the bodies and sections of the chamber. They will be involved in the project where it is meaningful, useful and necessary for them.

The Chamber of Commerce of Dolenjska and Bela Krajina (GZDBK) operates and works according to the expectations and directions of the board of directors. The operation is supervised by the supervisory committee. The legal representative of GZDBK is manager and president. The chamber also has six professional sections. Sections have their executive committee (IO), section president, annual assembly of members, annual professional day, forums of successful business practices (guests at companies with different business practices) and other events and activities (projects, awards, recognitions, exhibitions, fairs, etc.).

The SRC-EDIH project started in September 2022 and will run until September 2025. The operation of the chamber will be enriched through project activities. It is important to present the project to all members and enable them to participate in the project where it is meaningful, useful and necessary for them.

So far, we have presented the project to the board of directors (February 16), the executive committee of the Section for Innovation (February 15), Section for Informatics (February 16), Section for Environment and Energy (March 2), Section for Human Resources Management (March 6) and Section of accounting services (March 7). The Executive Committee of the Section for Quality will learn about the project on March 30 at its regular work session.

SRC-EDIH is one of the European digital innovation junctions, which will actively promote the digital transformation of small and medium-sized companies to increase the competitiveness and resilience of the European economy and society by taking into account the pillars of sustainable economic, environmental and social development. That is why we invited all present company representatives to participate in the project and co-design activities for digitization.
