

Visit to the company Mikrografija with Quality Section

3rd July 2026

The exchange of business best practices is an important part of the activities of the professional sections of GZDBK, providing members with first-hand insight into successful organizational, developmental, and technological practices implemented by companies in the region and beyond. As part of each section's annual work program, the executive committees also organize company visits, where professional topics are complemented by practical experience, networking, and the exchange of ideas among members.

On this occasion, the Quality Section ([QS](#)) visited Mikrografija Ltd., an international company with more than 30 years of experience in business digitalization, document management, archiving, and the development of advanced information solutions. Through its innovation, flexibility, and expertise, the company helps organizations of all sizes successfully implement digital transformation, automate business processes, and ensure secure management of documents and data.

Upon arrival, participants were welcomed by the company's management team, who presented Mikrografija's development, key products and services, and strategic direction in the field of digital business. Particular emphasis was placed on quality assurance through modern information technologies, digital processes, and advanced document digitization equipment.

The visit continued with a guided tour of the company's digitization facilities and state-of-the-art scanning equipment, where participants gained a closer understanding of the entire process of document capture, processing, and management. The presentation sparked an engaging professional discussion on the challenges of digital transformation, information security, process automation, and the role of quality management in implementing new technologies.

As part of the meeting, the Quality Section (QS) also held its annual assembly, dedicated to reviewing the section's activities, strengthening cooperation among members, and planning future initiatives in the fields of quality, business excellence, and the exchange of best practices. During the assembly, elections were held for the members of the Executive Committee and for the President of the Quality Section. Since 2021, the position of President had been held by Igor Cesar, Head of Quality at Revoz Ltd. Following this year's election, he was succeeded by Jurij Kos, Head of Quality Systems at Akrapovič Ltd.

Participants were also introduced to the continuation of the SRC-EDIH 2.0 project, a European Digital Innovation Hub that supports companies in their digital transformation by facilitating the adoption of advanced digital technologies, developing employees' digital competencies, and providing access to expert knowledge, training opportunities, and cooperation with innovation partners. They learned about the opportunities to join the project and the range of services available to help companies strengthen their competitiveness while accelerating both their digital and green transition.

The visit concluded with an informal networking session, during which participants emphasized the value of such meetings for knowledge transfer, experience sharing, and strengthening cooperation between companies. The hosts also presented numerous practical examples of modern digital solutions that significantly contribute to more efficient business operations and higher organizational quality.

Visits such as this once again demonstrate that direct insight into successful business practices provides significant added value for GZDBK members while fostering stronger business cooperation and supporting the development of excellence across the region.
