The event is organized by the Section of Accountant Services of Dolenjska and Bela Krajina in cooperation with the Faculty of Economics and Informatics, University of Novo Mesto.

Accounting, as a key component of business management, plays an increasingly important role in shaping sustainable and successful business practices. At the same time, it is crucial for recording working hours and managing employee assignments abroad. With the advancement of artificial intelligence, new opportunities are emerging for a better understanding, monitoring, and optimization of all areas of business and accounting, as well as the impact of business on the environment and society.

In this accounting conference, we will focus on the exciting intersection of accounting, sustainability, artificial intelligence, and the management of work records and employee assignments abroad. The presentations will guide us through innovative ways in which these four areas influence accounting work and complement each other in the modern business environment.

We will explore how technological progress can contribute to better understanding, monitoring, and improving sustainable practices, efficient management of work records, and successful assignment of employees abroad. We will shed light on some key aspects of how accounting can become a driving force for sustainable and efficient business in the future.

We invite all members of GZDBK, members of the Section of Accounting services of Dolenjska and Bela Krajina (SR DBK), as well as anyone else who wishes to join. Membership in the section is free for all employees of companies that are members of GZDBK.

You are cordially invited.
