

Linking quality: visit to FerroČrtalič and SK IO meeting

The Chamber of Commerce of Dolenjska and Bela Krajina (GZDBK) organises, among other things, a number of forums - visits and exchanges of good business practices of companies, entrepreneurs and other working organisations. The Executive Committees of each Section of the Regional Chamber draw up their own annual programme of Section activities and, as part of this programme, each Section also ensures the exchange of good business practices through visits. This time, the Section for Quality (SK) visited the company FerroČrtalič d. o. o.

After an introductory welcome by the host, a meeting of the IO SK followed, during which the members of the committee discussed current issues and challenges in the field of quality. The main focus of the meeting was on the content for the 26th Quality Day to be held in November this year.

The host then gave a presentation on quality and the digitalisation of quality in the company. The attendees were informed about the advanced solutions and approaches used by the company to achieve quality standards. This was followed by a guided tour of the production facility, where participants had the opportunity to see the state-of-the-art equipment and surface treatment technologies that the company develops and produces under the FerroECOBlast Europe brand.

The meeting ended with a social gathering and a banquet. The event was an excellent opportunity to deepen knowledge on quality and to exchange experiences and establish new business connections.

The event takes place as part of the [SRC-EDIH project](#).
